No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 /EMC_Celerra_SIDS3/ptodata/2/jaa/5_COMB.pep:*

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 1, Application US/09733524A

Patent No. 6534298

GENERAL INFORMATION:
APPLICANT: Taylor, Diane E.
APPLICANT: Taylor, Diane E.
APPLICANT: Ge, Zhongwing
TITLE OF INVENTION: WUCLEIC ACIDS ENCODING ALPHA-1,3
TITLE OF INVENTION: EXPRESSING THEM (amended)
FILE REFERENCE: 07254-049002
CURRENT APPLICATION NUMBER: US/09/733,524A
CURRENT FILING DATE: 1200-12-07
PRIOR APPLICATION NUMBER: US 09/092,315
PRIOR APPLICATION NUMBER: US 09/092,315
PRIOR PRILING DATE: 1998-06-05
PRIOR PILING DATE: 1997-06-06
NUMBER OF SEQ. ID NOS: 27
NUMBER OF SEG. ID NOS: 27

GENERAL INFORMATION:
APPLICANT: Taylor, Diane E.
APPLICANT: Taylor, Diane E.
TITLE OF INVENTION: WUCLEIC ACIDE ENCODING ALPHA-1,3
TITLE OF INVENTION: PUCOSTITRANSFERASES AND EXPRESSION SYSTEMS FOR MAKING AND
TITLE OF INVENTION: EXPRESSING THEM (amended)
FILE REFERENCE: 07224-049002
CURRENT APPLICATION NUMBER: US,10/392,098
CURRENT APPLICATION NUMBER: US,09/7733,524A
PRIOR FILING DATE: 1998-06-05
PRIOR FILING DATE: 1998-06-05
PRIOR APPLICATION NUMBER: US 60/048,857
PRIOR APPLICATION NUMBER: US 60/048,857
PRIOR FILING DATE: 1997-06-06
NUMBER OF SEQ ID NOS: 27

Published\_Applications Nucleic Acid and Published\_Applications Amino Acid database searches now generate two sets of results each. The Published\_Applications databases have been split into two parts to reduce the amount of time required for their daily updates. This results in more machine time being available for processing searches.

Newly published applications will appear in the Published\_Applications\_New databases; older published applications make up the Published\_Applications\_Main databases.

Searches run against Nucleic Acid Published\_Applications produce two sets of results, with the extensions rnpbm (Published\_Applications\_NA\_New).

Searches run against Amino Acid Published\_Applications produce two sets of results, with the extensions rapbm (Published\_Applications\_AA\_New).

APPLICANT: ALEXANDROV, Nickolai et al.
TITLE OF INVENTION: SEQUENCE-DETERMINED DNA FRAGMENTS AND CORRESPONDING POLYPEPTIDES
TITLE OF INVENTION: ENCONDED THERBY
FILE REFERENCE: 2750-1579PUS2
CURRENT APPLICATION NUMBER: US/10/953,349
CURRENT FILING DATE: 2004-09-30
NUMBER OF SEQ ID NOS: 40252
SOFTWARE: Patentin version 3.3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 5128, Application US/10953349

The present invention provides alpha-1,3/4-fucosyltransferase (also termed as fucosyltransferase) proteins and nucleic acids from various strains of Helicobacter pylori. This enzyme catalyzes the transfer of a fucosyltransferase polynucleotides and acceptor substrate. The fucosyltransferase polynucleotides and polypeptides are useful for the synthesis of oligosaccharides, glycoproteins and glycolipids. The present sequence is Helicobacter pylori fucosyltransferase protein. New isolated fucosyltransferase polynucleotides and polypeptides, useful for synthesizing oligosaccharides, glycoproteins, or glycolipids. Claim 1; SEQ ID NO 18; 97pp; English.

The invention relates a purified transmembrane segment-free alpha 1,3-
the invention relates a purified transmembrane segment-free alpha 1,3-
the Complement of the sequence: X.1-X.2-
Leu-Arg-X.3-X.4-Tyr, where X.1, X.2 and X.4 is Asp or Asn; and X.3 is
Leu-Arg-X.3-X.4-Tyr, where X.1, X.2 and X.4 is Asp or Asn; and X.3 is
Leu-Arg-X.3-X.4-Tyr, where X.1, X.2 and X.4 is Asp or Asn; and X.3 is
Leu-Arg-X.3-X.4-Tyr, where X.1, X.2 and X.4 is Asp or Asn; and X.3 is
Leu-Arg-X.3-X.4-Tyr, where X.1, X.2 and X.4 is Asp or Asn; and X.3 is
Cording the complement or fragment), a vector containing the mucleic acid or vector, an antibody which
comprising a host cell containing mucleic acid or vector, an antibody which
comprising a host cell modified with the mucleic acid or its
comprising the produced oligosaccharides, such as Lex, Ley or SLex, by
contacting the produced oligosaccharides, such as Lex, Ley or SLex, by
contacting the bots cell with a substrate, to produce oligosaccharides
and purifying the obtained oligosaccharides. The mucleic acid is useful
contacting the obtained oligosaccharides. The mucleic acid is useful
as a probe for detecting the mucleic acid, by contacting a sample with a
cucleic acid probe that hybridises to alphal.3-fucosyltransferase
contacting the mucleic acid, and actenting the mucleic acid, by contacting a sample with a
cucleic acid probe that hybridises to alphal.3-fucosyltransferase-fusion prodein, by growing the host cell containing a
cucleic acid probe that hybridises to alphal.3-fucosyltransferase-fusion prodein, by growing the host cell containing a
cucro reperiod under acidish polymerase chain reaction (PCR)
cucosyltransferase-fusion prodein, by growing the host cell containing
cucleic admining a sample. The protein in a sample is indicative of infection by Helicobacter pylori or the protein
confidence and monitoring disease, and for inhibiting abnormal applal.3-
cucosyltransferase gene product activity. The nucleic acid all seconds and polyment of a seasys to detect
confidence and conditi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          YGYVTEKIIDAYFSHTIPIYWGSPSVAKDFNPKSFVNVHDFKNFDEAIDYVRYLHTHPNA 300

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence represents an alpha-1,3/4-fucosyltransferase protein which was used in the method of the invention for producing a fucosylated glycoprotein. The method involves contexting a recombinant fucosyltransferase protein with a mixture comprising a donor substrate which comprises a fucosyl residue, and an acceptor substrate on a glycoprotein, under conditions such that the fucosyltransferase protein catalyzes the transfer of the fucosy residue from a donor substrate to the acceptor substrate to the glycoprotein. The method is useful for producing fucosylated glycoprotein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Producing fucosylated glycoprotein, by contacting recombinant fucosyltransferase protein with mixture comprising donor substrate and acceptor substrate on glycoprotein.

                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention relates to novel isolated polynucleotides and the encoded polypeptides thereof, which are related to the fucosyltransferase enzymes (Futh and FutB) of Helicobacter pylori (H. pylori). Specifically, it refers to alpha 1-3/4 fucosyltransferase enzymes that can be used to chemically synthesise glycoproteins and glycolipids with the desired oligosaccharide moieties (i.e. by transfer of a fucose residue to N-acetylglucosamine), such that they are useful in the preparation of altrosyltransferase is unaffected by the sialyation status of the acceptor sugar, as opposed to the mammalian homologue, and furthermore, bacterially expressed enzymes offer a large cost saving relative to sumamialian expression systems. This polypeptide sequence is an H. pylori strain 1218 FutB protein sequence of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     480
                                                            The present invention provides alpha-1,3/4-fucosyltransferase (also termed as fucosyltransferase) proteins and nucleic acids from various strains of Helicobacter pylori. This enzyme catalyzes the transfer of a fucose residue from a donor substrate to an acceptor substrate. The fucosyltransferase polymucleotides and polypeptides are useful for the synthesis of oligosaccharides, glycoproteins and glycolipids. The present sequence is Helicobacter pylori fucosyltransferase protein.

                                                                                                                                                                                                                                                      The invention relates a purified transmembrane segment-free alpha 1,3-
(throsyltransferase polypebtide, having a repeat of the sequence: X.1-X.2-
[Leu-Arg-X.3.4-Tyr, where X.1, X.2 and X.4 is Asp or Ann; and X.3 is
[Leu-Arg-X.3.4-Tyr, where X.1, X.2 and X.4 is Asp or Ann; and X.3 is
[Leu-Arg-X.3.4-Tyr, where X.1, X.2 and X.4 is Asp or Ann; and X.3 is
[Inc.yulor Ala. Also included are the nucleic acid encoding the protein
[C cid.d. a host cell containing uncleic acid or vector, an antibody which
selectively binds to the protein and a gene expression system for
selectively binds to the protein and a gene expression system for
producing transmembrane segment-free alpha! 3- fucosyltransferase,
comprising a host cell modified with the nucleic acid or its
comparising the protein with a substrate such as Lex. Ley or SLex, by
contacting the protein with a substrate, to produce oligosaccharides
contacting the protein with a substrate, to produce oligosaccharides
contacting the bots cell with a substrate, to produce oligosaccharides
contacting the bots cell with a substrate, to produce oligosaccharides
a probe for detecting the mucleic acid, by contacting a sample with a
nucleic acid probe that hybridises to alpha!, 3-fucosyltransferase
contacting the obtained oligosaccharides. The nucleic acid is useful
as a probe for detecting hybridises to alpha!, 3-fucosyltransferase
contacting the nucleic acid using polymerase chain reaction (PCR). The
nost cell is useful for producing a transmembrane segment-free alpha!, 3-
contacting the protein my protein. The antibody is useful
cor peptide under conditions which allow expression and secretion of the
cor peptide under conditions which allow expression and secretion of the
cusoyltransferase gene product activity. The nucleic acid is useful
cor detecting the protein in a sample. The presence of the protein in the
amplituant cells. The antibody is also useful for diagnosing disorders
and monitoring disease, and for inhibiting abnormal alpha!, 3-
cucosyltransferase gene regulation. O
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              GFASFVASNPNAPKRNAFYDALNSIEPVTGGGSVKNTLGYKVGNKNEFLSQYKFNLCFEN 237

                                                                                                                                                                                                                                                                                                              This invention relates to novel isolated polynucleotides and the encoded polypeptides thereof, which are related to the fucosyltransferase enzymes (Fuths and Futs) of Helicobacter pylori (H. pylori). Specifically, it refers to alpha 1-3/4 fucosyltransferase enzymes that can be used to chemically synthesise glycoproteins and glycolipids with the desired oligosaccharide moleties (i.e. by transfer of a fucose residue to N-acetylglucosamine), such that they are useful in the preparation of glycoconjugates. The present invention describes how bacterial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           fucosyltransferase is unaffected by the sialyation status of the acceptor sugar, as opposed to the mammalian homologue, and furthermore, absterially expressed enzymes offer a large cost saving relative to mammalian expression systems. This polypeptide sequence is an H. pylori strain 1182 FutB protein sequence of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       117
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   177
                                                                             This sequence represents an alpha-1,3/4-fucosyltransferase protein which was used in the method of the invention for producing a fucosylated glycoportein. The method involves contacting a recombinant fucosyltransferase protein with a mixture comprising a donor substrate which comprises a fucosyl residue, and an acceptor substrate on a glycoprotein, under conditions such that the fucosyltransferase protein catalyzes the transfer of the fucose residue from a donor substrate to the acceptor substrate on the glycoprotein. The method is useful for producing fucosylated glycoprotein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          241 SQGYGYVTEKIIDAYFSHTIPIYWGSPSVAQDFNPKSFVNVCDFKDFDEAIDHVRYLHTH

                                                                                                                                                                                            The present invention provides alpha-1,3/4-fucosyltransferase (also termed as fucosyltransferase) proteins and nucleic acids from various strains of Helicobacter pylori. This enzyme catalyzes the transfer of a fucose residue from a donor substrate to an acceptor substrate. The fucosyltransferase polymucleotides and polypeptides are useful for the synthesis of oligosaccharides, glycoproteins and glycolipids. The present sequence is Helicobacter pylori fucosyltransferase protein.
                                                                                                                                                                                                                                                                                                                                                                                              ONPNEPSDLVPGSPIGAARKILSYONTKRVFYAGENEVPNFNLPDYAIGFDELDLRDRYL 117

The invention relates a purified transmembrane segment-free alpha 1,3-
fucusyltransferase polypeptide, having a repeat of the sequence: X1-X2-
leu-Argy-X3-X4-Ty, where X1, X2 and X4 is Aap or Asn; and X-3 is
leu-Argy-X3-X4-Ty, where X1, X2 and X4 is Aap or Asn; and X-3 is
cleid, a host call containing nucleic acid or vector. an antibody which
acid, a host call containing nucleic acid or vector, an antibody which
comprising a host cell modified with the nucleic acid or its
comprising a host cell modified with the nucleic acid or its
comprising a host cell modified with the nucleic acid or its
comprising the protein with a substrate such as LackNc-R and GDP-fucose,
contacting the protein with a substrate, to produce oligopaccharides
contacting the protein with a substrate, to produce oligopaccharides
contacting the protein with a substrate, to produce oligopaccharides
and purifying the obtained oligosaccharides. The nucleic acid is useful
contacting the botained oligosaccharides. The nucleic acid is useful
as a probe for detecting the nucleic acid, by contacting a sample with a
nucleic acid probe that hybridises to alpha1,3-fucosyltransferase
contacting the nucleic acid using polymerase chain reaction (PCR). The
polymucleotide, and detecting hybridisation of the probe; or by
contacting the nucleic acid using polymerase chain reaction (PCR). The
host cell is useful for producing a transmembrane segment-free alpha1,3-
corposyltransferase-fusion protein, by growing the host cell containing a
cuctor operably linked to a polymucleotide encoding a desired polypeptide
cor peptide under conditions which allow expression and secretion of the
cuspile indicative of infection by Helicobacter pylori or the presence
cor memoritoring disease, and for inhibiting abnormal alpha1,3-
cof malignant cells rhe antibody is also useful for diagnosing disease, and for inhibiting abnormal alpha1,3-
cof maniforang case gene product activity. The nucleic acid is suseful as
fucosyltransferase gene product activity. The nucleic acid is an equ

Example 3; Fig 6; 37pp; English

C The invention relates a puritied transmembrane segment-tree alpha 1,3-c tucosyltransferase polypeptide, having a repeat of the sequence: X 1-X 2 c tucosyltransferase polypeptide, having a repeat of the sequence: X 1-X 2 c tucu-Arg-X 3-X 4-Tyr, where X 1, X 2 and X 4 is Asp or Asn; and X 3 is 1 c teu-Arg-X 3-X 4-Tyr, where X 1, X 2 and X 4 is Asp or Asn; and X 3 is 1 c 1 c 1 c Arg in the mucleic acid or vector, an antibody which selectively binds to the protein and agene expression system for containing the tree laplat, 3-fucosyltransferase, comprising a host cell modified with the nucleic acid or its contacting the protein with a substrate such as LackNac-R and GDP-fucose, contacting the protein with a substrate such as LackNac-R and GDP-fucose, contacting the protein with a substrate, to produce oligosaccharides, or by culturing the cell, contacting the protein with a substrate, to produce oligosaccharides, or by culturing the protein with a substrate, to produce oligosaccharides, or by culturing the bost cell with a substrate, to produce oligosaccharides, and purifying the produced oligosaccharides. The nucleic acid is useful as a probe for detecting the host cald using polymerse chain reaction (PCR). The polymelectide, and detecting phyridisation of the probe; or by contacting the nucleic acid using polymerse chain reaction (PCR). The contact operably linked to a polymerse chain reaction (PCR). The cost cell is useful for producing a transmembrane segment free alphal, 3-c fucosyltransferase-fusion protein, by growing the host cell containing a cettor operably linked to a polymerse chain reaction (PCR). The cost conditions which allow expression and secretion of the protein or cell are angele is indicative of infection by elections. The antibody is also useful for diagnosing disease, and for inhibiting abnormal alphal, 3-c fucosyltransferase gene product activity. The nucleic acid is an angle is indicative of infection or cell are useful in the development of assays to detect the protein or cell are negalat 176 236 296 356 -----DDLRADYNNLRADYNNLRADY 381 9 1 MFQPLLDAFIESASIEKAYVSKSPPPPLKIAVANWWGDEBIKEFKKSVLYFILSQRYAITL 241 NSQGYGYVTEKILDAYPSHTIPIYWGSPSVAKDFNPKSFVNVHDFNNFDEALDYIKYLHT NSQGYGYVTEKI I DAYPSHTI PI YWGS PSVAKDFNPKS FVNVHDPKNFDEAI DYVRYLHT HPNAYLDMLYENPLNTLDGKAYFYQDLSPKKILDFFKTILENDTIYHNNPFVFYRDLNEP |:|| 361 LISIDDLRVNYDDLRVNYDDLRVNYDDLRVNYDDLRVNYDDLRVNYDDLRVNY RGFAS FVASNPNAPKRNAPYDALNS I EPVTGGGS VKNTLGYKVGNKNEFLSQYKFNLCFE transmembrane segment-free alpha 1,3-117 LRMPLYYDRIHHKAESVNDTTAPYKIKPDSLYTLKKPSHHFKEKHPHLCAVVNDESDPLK NNLRADYNNLRADYDRLLQNRSPLLELSQNTTFKIYHKAYHKSLPLLRAIRRWVKK 437 1 MFQPLLDAFIESASIKKMPLSY--PPLKIAVANWWGGAE--EFKKSAMYFILSQRYTITL Gaps 39; Length 476; 33; Indels 83.9%; Score 1982.5; DB 5; 78.6%; Pred.                                                                                                                                                                                                                                                                                                                                                                                          Peptide
                                                                                                                                                                                                                                                                                                              Peptide
                                                                                                                                                                                                                                                                                                                                                    Peptide
                                                                                                                                                                                                                                                                                                                                                                       Peptide
RESULT 12
AAW86008
```

This is the amino acid sequence of the novel alpha-1,3-fucosyltransferase of Helicobacter pylori NCTC 11639, as deduced from the newly isolated fucT gene (see AAV80321). The enzyme is characterised by 8 C-terminal heptad repeats and by the lack of a transmembrane domain. The absence of a transmembrane domain allows the enzyme to be readily
